***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13, drawn to a composition for ultrasound imaging comprising microbubbles and a gas within a shell made from a blend of bipolar compounds and a method of ultrasound imaging by administering said composition.

Group II, claim(s) 14-20, drawn to a method of measuring pressure or fluid flow rate comprising inserting a composition comprising microbubbles into a closed system, measuring acoustical changes with frequency for the system and calculating the change in pressure or flow rate.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature for the Group I invention is a pharmaceutical composition for in vivo ultrasound and an in vivo diagnostic ultrasound imaging method, while the special technical feature of the Group II invention is measuring pressure or flow rates by measuring acoustic changes of a closed system.

This application contains claims directed to more than one species of the generic invention.

These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The various (and almost unlimited) number of species encompassed by the formula  $R_{(1-3)}-X-Z(Z')$ .

Applicant is required, in reply to this action, to elect **a single species (e.g., a specific compound which corresponds to the bipolar compound of one of the formula of the claims, as set forth above)** to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Art Unit: 1616

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1-20.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The various species' encompassed by the claimed formulae include very distinct chemical moieties which would be so diverse as to lack the same special technical feature of the claimed compound.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
